POI Installation Instructions - Magellan

Custom POI files require the use of the Magellan POI File Editor tool. This tool can be found on the software CD that is included with your Magellan GPS unit.

Turkey Hill Minit Markets does not provide support for Magellan's software tools. Please contact Magellan for support of Magellan tools.

1. Confirm compatibility of your particular GPS device with Magellan POI File Editor by referring to your GPS owner's manual.
2. Download the POI files from <http://www.turkeyhillstores.com>.
3. Custom POI files must be saved in a directory on your computer that is **only** for custom POI files and that contains no other files.
 - a. We recommend creating a new folder in your "My Documents" folder called "My POI".
 - b. Store all of your custom POI files in this new folder. All files you download are compressed in ZIP format. You must unzip the downloaded files before you use them.
4. Connect your Magellan GPS to your computer.
5. Start the Magellan POI File Editor software tool on your computer.
6. In POI File Editor, select Open from the File menu.
7. In the Open window, change Files of Type to "GPS eXchange Files".
8. Browse to the location on your computer where you saved the POI file you downloaded, select the file and click Open. If you followed our recommendation above, you will find the file in the "My Documents / My POI" folder.
9. Pick an optional symbol for the entries in this file if desired.
10. To transfer the file to your GPS unit, go to the File menu and click Transfer.
11. You must now setup your file on your Magellan GPS. Consult your owner's manual, as the procedure varies based on the specific model.
